AMG OB/GYN Update:
Guidelines for Managing Pelvic Masses in the Female Patient

Presented by: Luis Rojas, MD, FACOG

Purpose: Upon completion of this education, the learner will be able to identify symptoms, imaging characteristics, and tools for diagnosis of a pelvic mass. Additionally, they will be able to understand the algorithm for appropriate management of pelvic masses in female patients within childbearing ages as well as the algorithm for appropriate management of pelvic masses in postmenopausal patients.

Objectives:

1. Identify the symptoms, imaging characteristics and tools available for diagnosis that will lead to proper management of pelvic masses in the female patient.
2. Appropriately utilize the algorithm for appropriate management of pelvic masses in female patients with in childbearing age..
3. Appropriately utilize the algorithm for appropriate management of pelvic masses in postmenopausal patients.

Target Audience: Obstetrics/Gynecology, Family Practice Physicians, APRNs, PAs, and RNs.
